

Gaurav

AI Engineer & Full-Stack Developer

Email: contact@gauravxd.dev | GitHub: github.com/GauravFrr

SUMMARY

Self-taught AI Engineer and full-stack developer with about 3 years of hands-on experience across Python, LLM tooling, and modern web stacks. Specializing in RAG systems, LLM memory layers, and AI SaaS.

PROJECTS

1. Retryv - Production-Grade RAG System

Stack: Python, Gemini API, ChromaDB, BM25+RRF, Streamlit
Highlight: Caught a silent data-coverage bug in ChromaDB ingestion that left collections sparsely populated.

2. MemoryOS - Universal AI Memory Layer

Stack: Next.js 15, NestJS, PostgreSQL, pgvector, Redis, BullMQ, Chrome Extension
Highlight: Built a context-injection engine that selects and injects relevant memories without bloating context.

3. Brefly - White-Label Client Reporting SaaS

Stack: FastAPI, Next.js 15, Supabase, Redis, WeasyPrint, Gemini API, Razorpay, Stripe
Highlight: Designed dual payment-provider integrations (Razorpay & Stripe) for regional/international markets.

4. Nyxleads - AI Lead Scraping CLI Tool

Stack: Python, CLI, AI Scoring, License Key Auth, Hardware Fingerprinting
Highlight: Implemented license-key validation and hardware fingerprinting to bind licenses to a single device.

EXPERIENCE

- Oasis Infobyte (OIBSIP) - Web Development Intern (July 2026 - Present)
Designing clean interface layouts, custom styling, accessibility controls, and smooth animations.
- Cognifyz IT Solutions - Python Development Intern (July - August 2026)
Developed automated Python web scrapers to gather directory listings and data cleaning utilities.
- CodeAlpha - Web Development Intern (June - July 2026)
Built responsive user landing pages using HTML, CSS, and JS with interactive widgets and forms.

EDUCATION

Bachelor of Computer Applications (BCA) - Starting October 2026
